Adolescent Identity Treatment: An Integrative Approach for Personality Pathology is a ground breaking title that provides general and specific clinical strategies to help adolescents who lack an integrated identity. The authors have developed a treatment based on the integration of object relations theory, family systems, attachment, developmental neurobiology and cognitive behavioral approaches that focuses on clearing blockages to normal identity development and adaptive functioning. While most adolescents build satisfying interpersonal relationships, are successful in school and work and begin romantic relationships, there is a minority of adolescents who do not succeed in this and are at a high risk of developing problems in school, work and relationships, problems with affect regulation as well as engaging in a wide range of self-destructive behaviors. In addition to a description of the disorder and assessment, this manual offers extensive clinical examples and concrete interventions, with phase-specific treatment components, including a clear treatment frame, psychoeducation, environmental interventions (with a "Home Plan" that addresses self-care behaviors, responsibilities and improved boundaries that fosters the development of better relationships between the adolescent and family) and parenting strategies, all in the service of creating a space for the individual work with the adolescent.

This Provider's Guide introduces a comprehensive and developmentally appropriate treatment

program,, Pathways for Self-Discovery and Change (PSDC), which provides the specific tools necessary for improving evaluation and treatment of at-risk youth, a particularly vulnerable patient population in the justice system. Using an adolescent-focused format, this protocol identifies psychological, biological, and social factors that contribute to the onset of adolescent deviance, and establishes guidelines for delivery of a 32-session treatment curriculum designed to rehabilitate both male and female adolescents with co-occurring substance abuse and criminal conduct. Now in its Second Edition, this guide provides treatment practitioners, program evaluators, and youth services administrators with the most up to date, comprehensive, and accessible information for the treatment and rehabilitation of juvenile justice clients. It is built on theoretical and research advances in the treatment and rehabilitation of juvenile justice clients, as well as feedback over the past seven years from PSDC counselees, treatment providers, and program administrators.

Published in the year 1994, Handbook Of Adolescent Inpatient Psychiatric Treatment is a valuable contribution to the field of Psychiatry/Clinical Psychology.

You don't have to reinvent the wheel--select and implement an effective substance abuse program from this essential book! This essential book is the first ever published on exemplary models of adolescent drug treatment. It delivers detailed descriptions of exemplary drug treatment models and gives you the latest information on substance use and its consequences to aid your work with adolescents who use alcohol and drugs. The in-depth examinations of treatment models you'll find in this book include programs serving adolescent substance users from a wide range of ethnic and cultural backgrounds (African Americans, Hispanics, Whites, Native Americans, Russian Immigrants). With sections covering outpatient, residential, family-oriented, and modified therapeutic community (TC) programs, this book is a vital reference for educators and students as well as practitioners. Adolescent Substance Abuse Treatment in the United States: Exemplary Models from a National Evaluation Study gives you thoughtful examinations of: trends in adolescent substance use and treatment approaches three exemplary outpatient treatment programs, including program design, treatment issues, and client characteristics the Multidimensional Family Therapy Approach (MDFT), a family-oriented outpatient treatment model used to intervene with younger adolescents a 30- to 60-day residential treatment program that is based on a medical model which blends in treatment approaches from the therapeutic community model the special treatment needs and issues of substance-using Native American youths issues of gender differences as they relate to drug use and trauma three different modified therapeutic community treatment models and much more! Adolescent Substance Abuse Treatment in the United States is an invaluable source of information for anyone working with this vulnerable population. Use it to choose and implement the program that will work best for you and your clients!

First Published in 2017. Routledge is an imprint of Taylor & Francis, an Informa company.

As an emerging psychotherapeutic discipline, drama therapy has been gaining global attention over the last decade for its demonstrated efficacy in the treatment of child and adolescent populations. However, despite this attention and despite the current turbulent state of the world and the increasing population of disturbed and at-risk children, the field of drama therapy has so far lacked a standard text. Weber and Haen's book fills this need, providing a core text for graduate students and established professionals alike. Clinical Applications of Drama Therapy in Child and Adolescent Treatment is guided by theory, but firmly rooted in practice, providing a

Online Library Adolescent Identity Treatment

survey of the many different possibilities and techniques for incorporating drama therapy within child and adolescent therapy. More than merely a survey of the existing literature on drama therapy, this text represents a true expansion of the field: one which articulates the breadth of possibilities and applications for drama therapy in the larger context of psychotherapy.

As our world becomes increasingly permeable, and as human populations are rapidly converging and transitioning within a global interconnectedness, it is vital that we look to, and learn from, those most adept at the adaptation, creation, and contesting of culture: adolescents. This text is designed to bridge critical gaps in the understanding of the daily lives, identity development, and experiences of adolescents in diverse cultures around the world. Cultural context is predictive of developmental uniqueness; comparisons provide insights into how social structures and relationships influence the manifestation of individual patterns of development and experience. In quantitative and qualitative detail, the contributors relate the nature of adolescent life to cultural, biological, ecological, demographic, and social variables. The findings of this book will be relevant not only to other social anthropologists, but also to sociologists and developmental/educational psychologists.
