ISIS, short for Intel System Implementation Supervisor, is an operating system for early Intel microprocessors like the 8080. It was originally developed by Ken Burgett and Jim Stein under the management of Steve Hanna and Terry Opdendyk for the Intel Microprocessor Development System with two 8" floppy drives, starting in 1975, and later adopted as ISIS-II as the operating system for the PL/M compiler, assembler, link editor, and In-Circuit Emulator. The ISIS operating system was developed on a

Metafer, Ikaros, and Isis are the systems of choice for innovative, efficient, and fast analysis of human, plant, and animal samples. Trainable chromosome classifiers, a large number of pre-defined karyogram forms for various species, and the innovative karyogram editor make the system ready to be used with samples from numerous species.
