With only 1% difference, the human and chimpanzee protein-coding genomes are remarkably similar. Understanding the biological features that make us human is part of a fascinating and intensely ...

Drawing on the latest scientific research and her own work with animals, the author discusses the emotional needs of animals and how to fulfill them, challenging common myths about animal emotions, mental stimulation, and emotional well-being.

Why are dogs so eager to please their owners? Why are some cats bold and others shy? And why do chickens hide their eggs? In this follow-up to her groundbreaking international bestseller, *Animals in Translation*, animal scientist Temple Grandin delivers extraordinary insights into how animals think, helping us give our animals the best and happiest lives - on their terms, not ours. Drawing on her latest research, she identifies the core emotional needs of animals and how to fulfil them. Whether it's creating a happy home for a dog, encouraging cats to be less antisocial, keeping pigs from being bored, or knowing if the lion pacing in the zoo is miserable or just exercising, Grandin teaches us to challenge our assumptions about animal emotions. This is essential and fascinating reading for anyone who owns or cares for an animal.

With unique personal insight, experience, and hard science, *Animals in Translations* is the definitive, groundbreaking work on animal behavior and psychology. Temple Grandin 's professional training as an animal scientist and her history as a person with autism have given her a perspective like that of no other expert in the field of animal science. Grandin and coauthor Catherine Johnson present their powerful theory that autistic people can often think the way animals think—putting autistic people in the perfect position to translate “ animal talk. ” Exploring animal pain, fear, aggression, love, friendship, communication, learning, and even animal genius, Grandin is a faithful guide into their world. *Animals in Translation* reveals that animals are much smarter than anyone ever imagined, and Grandin, standing at the intersection of autism and animals, offers unparalleled observations and extraordinary ideas about both.

Paul Shepard has been one of the most brilliant and original thinkers in the field of human evolution and ecology for more than forty years. His thought-provoking ideas on the role of animals in human thought, dreams, personal identity, and other psychological and religious contexts have been presented in a series of seminal writings, including *Thinking Animals*, *The Tender Carnivore and the Sacred Game*, and now *The Others*, his most eloquent book to date. *The Others* is a fascinating and wide-ranging examination of how diverse cultures have thought about, reacted to, and interacted with animals. Shepard argues that humans evolved watching other animal species, participating in their world, suffering them as parasites, wearing their feathers and skins, and making tools of their bones and antlers. For millennia, we have communicated their significance by dancing, sculpting, performing, imaging, narrating, and thinking them. The human species cannot be fully itself without these others. Shepard considers animals as others in a world where otherness of all kinds is in danger, and in which otherness is essential to the discovery of the true self. We must understand what to make of our encounters with animals, because as we prosper they vanish, and ultimately our prosperity may amount to nothing without them.

Explores the latest beliefs about why people tell stories and what stories reveal about human nature, offering insights into such related topics as universal themes and what it means to have a storytelling brain.

A leading anthrozoologist and the bestselling author of *Dog Sense* and *Cat Sense* explains why we are so drawn to pets. Historically, we relied on our pets to herd livestock, guard homes, and catch pests. But most of us don't need animals to do these things anymore. Pets have never been less necessary. And yet, pet ownership has never been more common than it is today: half of American households contain a cat, a dog, or both. Why are pets still around? In *The Animals Among Us*, John Bradshaw, one of the world's leading authorities on the relationship between humans and animals, argues that pet ownership is actually an intrinsic part of human nature. He explains how our empathy with animals evolved into a desire for pets, why we still welcome them into our families, and why we mourn them so deeply when they die. Drawing on the latest research in biology and psychology, as well as fields as diverse as robotics and musicology, *The Animals Among Us* is a surprising and affectionate history of humanity's best friends.

A response to the devastating 2019–20 bushfires, *Animals Make Us Human* both celebrates Australia 's unique wildlife and highlights its vulnerability. Through words and images, writers, photographers and researchers reflect on their connection with animals and nature.

They share moments of wonder and revelation from encounters in the natural world: seeing a wild platypus at play, an echidna dawdling across a bush track, or the inexplicable leap of a thresher shark; watching bats take flight at dusk, or birds making a home in the backyard; or following possums, gliders and owls into the dark. Hopeful, uplifting and deeply moving, this collection is also an urgent call to action, a powerful reminder that we only have one world in which to coexist and thrive with our fellow creatures. By highlighting the beauty and fragility of our unique fauna, Australia's favourite writers, renowned researchers and acclaimed photographers encourage readers to consider it in a new light. Featuring: Barbara Allen, Robbie Arnott, Tony Birch, James Bradley, Mark Brandi, Geraldine Brooks, Anne Buist, Melanie Cheng, Claire G. Coleman, Ceridwen Dovey, Chris Flynn, Nayuka Gorrie, Dan Harley, Ashley Hay, Toni Jordan, Leah Kaminsky, Paul Kelly, Meg Keneally, Tom Keneally, Cate Kennedy, David Lindenmayer, Ella Loeffler, Maia Loeffler, Jen Martin, Angela Meyer, Sonia Orchard, Favel Parrett, Marissa Parrott, Bruce Pascoe, Jack Pascoe, Sue Pillans, Nick Porch, Holly Ringland, Euan Ritchie, Antoinette Roe, Kirli Saunders, Graeme Simsion, Tracy Sorensen, Shaun Tan, Lucy Treloar, Karen Viggers, Emma Viskic, John Woinarski, Clare Wright. And photographers: Tim Bawden, Kristian Bell, Rohan Bilney, Justin Bruhn, Andrew Buckle, Matt Clancy, Amy Coetsee, Craig Coverdale, Angus Emmott, Jayne Jenkins, Vivien Jones, Sue Liu, Michael Livingston, Caleb McElrea, Nick Monaghan, Richard Pillans, Gillian Rayment, Linda Rogan, David Maurice Smith, Steve Smith, Colin Southwell, Georgina Steytler, Wayne Suffield, Heather Sutton, Peter Taylor, William Terry, Patrick Tomkins, Matt Wright.

A bold, illuminating new take on the love of animals that drove human evolution. Why do humans all over the world take in and nurture other animals? This behavior might seem maladaptive—after all, every mouthful given to another species is one that you cannot eat—but in this heartening new study, acclaimed anthropologist Pat Shipman reveals that our propensity to domesticate and care for other animals is in fact among our species' greatest strengths. For the last 2.6 million years, Shipman explains, humans who coexisted with animals enjoyed definite adaptive and cultural advantages. To illustrate this point, Shipman gives us a tour of the milestones in human civilization—from agriculture to art and even language—and describes how we reached each stage through our unique relationship with other animals. The Animal Connection reaffirms our love of animals as something both innate and distinctly human, revealing that the process of domestication not only changed animals but had a resounding impact on us as well.

In a world increasingly dominated by human beings, the survival of other species becomes more and more questionable. In this brilliant book, Paul Shepard offers a provocative alternative to an "us or them" mentality, proposing that other species are integral to humanity's evolution and exist at the core of our imagination. This trait, he argues, compels us to think of animals in order to be human. Without other living species by which to measure ourselves, Shepard warns, we would be less mature, care less for and be more careless of all life, including our own kind.

Does living with a pet really make people happier and healthier? What can we learn from biomedical research with mice? Who enjoys a better quality of life—the chicken destined for your dinner plate or the rooster in a Saturday night cockfight? Why is it wrong to eat the family dog? Drawing on more than two decades of research into the emerging field of anthrozoology, the science of human–animal relations, Hal Herzog offers an illuminating exploration of the fierce moral conundrums we face every day regarding the creatures with whom we share our world. Alternately poignant, challenging, and laugh-out-loud funny—blending anthropology, behavioral economics, evolutionary psychology, and philosophy—this enlightening and provocative book will forever change the way we look at our relationships with other creatures and, ultimately, how we see ourselves.
