Acquire a better understanding of disease evolution and treatment response with Neuroradiology Spectrum and Evolution of Disease. The unique format includes carefully chosen clinical images that depict the pathologic evolution of disease from initial presentation across the continuum of progression. Colorful graphics plot characteristic changes, helping you visualize how normal and abnormal variations

alter over time. Extensive illustrations and concise descriptions distill complex concepts, making this first-of-its-kind resource an excellent tool for imaging interpretation and clinical problem solving. Presents neurologic disease from a novel imaging perspective, emphasizing evolutionary development and pointing out patterns to recognize. Provides a state-of-the-art understanding of image interpretation based on early, middle, and late imaging characteristics; typical and atypical variants; and pre-treatment, post-treatment, progression, and regression characteristics. Guides you through the progression of disease with chronological indicators, additional clinical images and descriptions, and annotations that highlight atypical findings for an easy-to-digest, visually memorable presentation. Helps you correctly interpret specific imaging characteristics you have never seen, even when the disease process is one you are familiar with.

A guide to practitioners who are interested in adding one or more of the methods being discussed to their therapeutic armamentarium. Focus is on manipulation, movement therapies, mindbody therapies, and a miscellaneous group that includes acupuncture and nutritional therapy.

This volume is based on contributions from the First International Conference on "Recent Advances in Natural Language Processing" (RANLP'95) held in Tzigrav Chark, Bulgaria, 14-16 September 1995. This conference was one of the most important and competitively reviewed conferences in Natural Language Processing (NLP) for 1995 with submissions from more than 30 countries. Of the 48 papers presented at RANLP'95, the best (revised) papers have been selected for this book, in the hope that they reflect the most significant and promising trends (and latest successful results) in NLP. The book is organised thematically and the contributions are grouped according to the traditional topics found in NLP: morphology, syntax, grammars, parsing, semantics, discourse, grammars, generation, machine translation, corpus processing and multimedia. To help the reader find his/her way, the authors have prepared an extensive index which contains major terms used in NLP; an index of authors which lists the names of the authors and the page numbers of their paper(s); a list of figures; and a list of tables. This book will be of interest to researchers, lecturers and graduate students interested in Natural Language Processing and more specifically to those who work in Computational Linguistics, Corpus Linguistics and Machine Translation.

Current Trends in Biomanufacturing focuses on cutting-edge research regarding the design, fabrication, assembly, and measurement of bio-elements into structures, devices, and systems. The field of biomaterial and biomanufacturing is growing exponentially in order to meet the increasing demands of for artificial joints, organs and bone-fixation devices. Rapid advances in the biological sciences and engineering are leading to newer and viable resources, methods and techniques that may providing better

quality of life and more affordable health care services. The book covers the broad aspects of biomanufacturing, including: synthesis of biomaterials; implant coating techniques; spark plasma sintering; microwave processing; and cladding, powder metallurgy and electrospinning. The contributors illustrate the recent trends of biomanufacturing, highlighting the important aspects of biomaterial synthesis, and their use as feedstock of fabrication technologies and their characterization, along with their clinical practices. Current Trends in Biomanufacturing updates researchers and scientists the novelties and techniques of the field, as it summarises numerous aspects of biomanufacturing, including synthesis of biomaterials, fabrication of biomedical structures, their in-vivo/ in-vitro, mechanical analysis and associated ISO standards.

What Is Dramaturgy? attempts to document, by way of articles, statements, and bibliographies, the dramaturg's profession, which began with Lessing in Germany in the second half of the eighteenth century and was instituted in the United States two hundred years later during the rise of the regional theatre movement. As critics-in-residence (also known as literary managers), dramaturgs perform a variety of tasks: broadly speaking, they select and prepare playtexts for performance, advise directors, and educate the audience; they are translators, theatre historians, public lecturers, even «artistic consciences.» Dramaturgy literally means «the craft or the techniques of dramatic composition considered collectively», and in a sense the dramaturg is the dramatist's representative or advocate in the theatre. That is, he is the guardian of the text - new as well as old - and therefore a person whose work is necessary for the revival of dramatic art in our time. What Is Dramaturgy? is dedicated in the end not only to promoting the dramaturg's function, but also to anticipating his creation of an intellectually illumined American theatre.

This book comprises the select proceedings of the International Conference on Power Engineering Computing and Control (PECCON) 2019. This volume focuses on the different renewable energy sources which are integrated in a smart grid and their operation both in the grid connected mode and islanded mode. The contents highlight the role of power converters in the smart grid environment, battery management, electric vehicular technology and electric charging station as a load for the power network. This book can be useful for beginners, researchers as well as professionals interested in the area of smart grid technology.

Traumatic brain injury (TBI) accounts for up to one-third of combat-related injuries in Iraq and Afghanistan, according to some estimates. TBI is also a major problem among civilians, especially those who engage in certain sports. At the request of the Department of Defense, the IOM examined the potential role of nutrition in the treatment of and resilience against TBI.

Modified atmosphere packaging may be defined as an active packaging method in which an altered atmosphere is created in the headspace that retards chemical deterioration while simultaneously retarding growth of spoilage organisms. Shelf lives of perishable products, such as dairy products, meat, poultry, fish, fruits and vegetables, and bakery items are limited by biochemical changes in the product catalysed by exposure to the normal atmosphere (21 % oxygen, 78% nitrogen and less than 0.1 % carbon dioxide) and growth of spoilage organisms. Modification of the atmosphere within a package containing these products helps to better maintain the quality of the food under longer storage conditions and retards the growth of undesirable organisms. Of course, deterioration is also slowed by chilling, which is required for the transport to market of highly perishable items like meat, poultry and fish that would either spoil or have the potential for contamination by certain food pathogens. Chilling plus a modification of the atmosphere optimizes the keeping quality of food. Modification of the atmosphere has been known for over a century as a means of food preservation and has become a very popular means of food preservation in the latter part of the 20th century. Modified atmosphere packaging (MAP) is practised extensively in Europe, Canada and the US. Both vacuum packaging (removal of air from
