Does the prospect of answering tough interview questions fill you with fear? Are you worried you'll clam up and ruin your chances of being successful in winning the job of your dreams? This guide book is written by psychologists who specialise in the recruitment process so they know exactly what your interviewer wants to hear from you. Packed with practice questions, sample tests and tips on how to impress a prospective employer this book will arm you with the tools you need to cope with any interview scenario, including the dreaded competency-based questions that recruiters are using with increasing frequency. This book will help you whether you're a first or second jobber, a career changer or maybe you're returning to work after a break and need some extra guidance to get back in the game. You can be reassured that it will equip you with the confidence you need to answer tough questions with ease and achieve interview success you deserve. The You're Hired! series shows job hunters how to research, apply for and land the job of their dreams.

Everyone Has a Unique Pathway to Faith. Take the First Step! - Perhaps you are open to the Christian faith, but in no way convinced. You have legitimate questions or lingering doubts. - Perhaps you seek a spiritual rooting--that comes from deep beliefs. - Perhaps you hope to experience the living God--in a way that's real and sticks. - Perhaps you are searching for something compelling--a vision for your life! If you are willing, simply, to take the first exploring step, this booklet charts the way forward. It fulfills Jesus's promise that "those who seek will find." Welcome to a discovery-path of unlimited potential. It can bless you--beyond measure! Vignettes Inside: The First Step - A Tale of Two Operators - Jesus: Poser or Pedigree? - Something Has Gone Really Wrong! - Jesus Came to Fix What We Can't - The Meaning of the Cross - The Sign of the Resurrection - What's Unique about Christianity - Miscues in Approaching Faith - Faith & Flying - Navigating Forward - Rear View Mirror - Stepping Up - What Surfers Know To pursue your questions, curiosity, and longings, Steps to Faith can be read personally, with a Christian friend, or by a class/group at church.

Step-by-step guidance for implementing process-based therapy in practice Evidence-based mental health treatments--including cognitive behavioral therapy (CBT)--have long been defined in terms of scientifically validated protocols focused on syndromes. This is rapidly changing. A process focus is now emerging for evidence-based therapies, as the era of "protocols for syndromes," passes away. This groundbreaking book offers concrete strategies for adopting a process-based approach in your clinical practice, and provides step-by-step guidance for formulating effective treatment plans. Written by renowned psychologists Steven C. Hayes and Stefan G. Hofmann, this manual will show you how to utilize the core competencies of process-based therapy (PBT) in a way that honors the behavioral, cognitive, and acceptance and mindfulness wings of CBT and builds bridges to other models. In the book, you'll find a comprehensive road map to the theoretical foundations of PBT, as well as techniques for creating customized treatments that address the unique needs of each client--leading to better therapeutic outcomes. Whether you're a clinician or student of the behavioral sciences, this book has everything you need to understand and implement PBT in your work.

This book provides the first English language account of the interview method known as the PCI. Offering a way of collecting knowledge by means of involving people actively in the research process, the interviewer takes the role of a well-informed traveller. With careful preparation and planning, the interviewer sets out with priorities and expectations, but the story the interviewer tells about his journey depends on the people encountered along the road. Novice and experienced interview researchers across the social, educational and health sciences will find this an invaluable guide to conducting interviews. Andreas Witzel is senior researcher (retired) at the University of Bremen and former director of the Bremen Archive for Life Course Research. Herwig Reiter is senior researcher in the Department of Social Monitoring and Methodology of the German Youth Institute in Munich.

This book constitutes the refereed proceedings of the International Conference IFIP TCS 2000 held in Sendai, Japan in August 2000. The 32 revised full papers presented together with nine invited contributions were carefully reviewed and selected from a total of 70 submissions. The papers are organized in two tracks on algorithms, complexity, and models of computation and on logics, semantics, specification, and verification. The book is devoted to exploring new frontiers of theoretical informatics and addresses all current topics in theoretical computer science.

Mountaineers, Rock Climbers, and Science Educators Around the 1920s, rock climbing separated from mountaineering to become a separate sport. At that time European climbers developed new equipment and techniques, enabling them to ascend mountain faces and to climb rocks, which were considered unassailable up to that time. American climbers went further by expanding and improving on the equipment. They even developed a system of quantification where points were given for the degree of difficulty of an ascent. This system focused primarily on the pitch of the mountain, and it even calculated up to de- mals to give a high degree of quantification. Rock climbing became a technical system. Csikszentmihaly (1976) observed that the sole interest of rock climbers at that time was to climb the rock. Rock climbers were known to reach the top and not even glance around at the scenery. The focus was on reaching the top of the rock. In contrast, mountaineers saw the whole mountain as a single "unit of perc- tion. " "The ascent (to them) is a gestalt including the aesthetic, historical, personal and physical sensations" (Csikszentmihaly, 1976, p. 486). This is an example of two contrasting approaches to the same kind of landscape and of two different groups of people. Interestingly, in the US, Europe, and Japan a large segment of the early rock climbers were young mathematicians and theoretical physicists, while the mountaineers were a more varied lot.

All you need to successfully undertake a research project! This exciting new book provides radiography students and practitioners with the key skills and strategies required to undertake research within medical imaging and radiotherapy. Quantitative and qualitative research methods are covered and guidance given on the entire research process - from literature researching, information management and literature evaluation, through to data collection, data analysis and writing up. Specific instruction is given on the structure and presentation of dissertations, writing articles for publication and on presentation skills for presenting at conferences. FEATURES Tailored to meet the specific needs of radiography students plus practitioners undertaking research Includes practice tips and pitfalls to avoid Covers how to apply for research funding for larger scale projects Practical examples throughout clarify the concepts Accompanying EVOLVE website EVOLVE website An accompanying website includes interactive examples of how to use the statistics tests discussed within the text. Tailored to meet needs of radiography and medical imaging students and practitioners undertaking research Accompanying website includes 10 examples on how to use descriptive and inferential statistics packages with interactive 10-step exercises and video clips on how to start up the packages Case examples throughout clarify concepts.

This collection offers empirical studies and theoretical essays about human communication in everyday life. The writings come from many of the world's leading researchers and cut across academic boundaries, engaging scholars and teachers from such disciplines as communication, sociology, anthropology, linguistics, and education. Chapters emphasize empirical, qualitative studies of people's everyday uses of talk-in-interaction, and they feature work in such areas as sociolinguistics, conversation analysis, discourse analysis, and ethnography. The volume is dedicated to and highlights themes in the work of the late Robert Hopper, an outstanding scholar in communication who pioneered research in Language and Social Interaction (LSI). The contributors examine various features of human interaction (such as laughter, vocal repetition, and hand gestures) occurring naturally within a variety of settings (at a dinner table, a doctor's office, an automotive repair shop, and so forth), whereby interlocutors accomplish aspects of their interpersonal or institutional lives (resolve a disagreement, report bad medical news, negotiate a raise, and more), all of which may relate to larger social issues (including police brutality, human spirituality, death, and optimism). The chapters in this anthology show that social life is largely a communicative accomplishment and that people constitute the social realities experienced every day through small and subtle ways of communicating, carefully orchestrated but commonly taken for granted. In showcasing the diversity of contemporary LSI research, this volume is appropriate for scholars and graduate students in language and social interaction, communication, sociology, research methods, qualitative research methods, discourse analysis, conversation analysis, linguistics, and related areas.

This is the first textbook on attribute exploration, its theory, its algorithms for applications, and some of its many possible generalizations. Attribute exploration is useful for acquiring structured knowledge through an interactive process, byasking queries to an expert. Generalizations that handle incomplete, faulty, orimprecise data are discussed, but the focus lies on knowledge extraction from areliable information source.The method is based on Formal Concept Analysis, a mathematical theory ofconcepts and concept hierarchies, and uses its expressive diagrams. The presentation is self-contained. It provides an introduction to Formal Concept Analysiswith emphasis on its ability to derive algebraic structures from qualitative data,which can be represented in meaningful and precise graphics.
