Hans Jürgen Eysenck - has there ever been a psychologist like him? Born in Berlin in 1916 during the Great War, Eysenck was a leading figure in postwar British psychology. He developed a distinctive dimensional model of personality based on factor-analytic summaries, audaciously attempting to anchor these dimensions in biogenetic variation.

Smoking, personality and reasons for smoking ...

The ambiguities of Eysenck's personal biography before coming to the UK from Berlin in 1935, the frequent charges against him of manipulating or overinterpreting his (or rather his students') data, his inflammatory entry into the race/IQ controversy, his acceptance of large sums of money from the tobacco industry for research aimed at circumventing the link between smoking and cancer, all find their place in Buchanan's distinctly non-hagiographical account.

Hans Eysenck's controversial career - The Lancet

This study compares the personality characteristics of men who use smokeless tobacco (ST) products with smokers and non-users. The Eysenck Personality Questionnaire (EPQ), the State-Trait Personality Inventory (STPI), and the Anger Expression (AX) Scale were given to a heterogeneous sample of 755 men residing in Florida and Texas, consisting of 275 ST-Users, 272 smokers, and 208 non-users.

Personality characteristics of users of smokeless tobacco ...

Hence, Petticrew et al. proved the tobacco industry to have substantially helped generate the scientific controversy on TABP, contributing to the (in lay circles) enduring popularity and prejudice for Type A personality even though it has been scientifically disproven.

Type A and Type B personality theory - Wikipedia

Eysenck (1991) suggested personality is critical to understanding the nature of tobacco use status. Lynch (1995) proposed that the failure of anti-tobacco use programs may have been inevitable by not considering intrinsic psychological factors due to the prevailing assumptions that young adults are driven solely by extrinsic and social factors when choosing to smoke or not to smoke.

A comparison of personality types considering tobacco use ...

Eysenck Personality Questionnaire (EPQ) is a questionnaire to assess the personality traits of a person, with the result sometimes referred to as the Eysenck's personality Inventory. It was devised by the psychologists Hans Jürgen Eysenck and Sybil B. G. Eysenck. Hans Eysenck's theory is based primarily on physiology and genetics.

Extraversion was measured with the Eysenck Personality Inventory (Eysenck & Eysenck, 1964). In a subsequent replication and extension of this study Gilliland (1976) dosed subjects by body weight (0, 2 and 4 mg/kg) and measured extraversion using the Eysenck Personality Questionnaire (Eysenck & Eysenck, 1975) for all of his subjects and the ...

Current public health literature suggests that the mentally ill may represent as much as half of the smokers in America. In Smoking Privileges, Laura D. Hirshbein highlights the complex problem of mentally ill smokers, placing it in the context of changes in psychiatry, in the tobacco and pharmaceutical industries, and in the experience of mental illness over the last century. Hirshbein, a medical historian and clinical psychiatrist, first shows how cigarettes functioned in the old system of psychiatric care,

revealing that mental health providers long ago noted the important role of cigarettes within treatment settings and the strong attachment of many mentally ill individuals to their cigarettes. Hirshbein also relates how, as the sale of cigarettes dwindled, the tobacco industry quietly researched alternative markets, including those who smoked for psychological reasons, ultimately discovering connections between mental states and smoking, and the addictive properties of nicotine. However, *Smoking Privileges* warns that to see smoking among the mentally ill only in terms of addiction misses how this behavior fits into the broader context of their lives. Cigarettes not only helped structure their relationships with other people, but also have been important objects of attachment. Indeed, even after psychiatric hospitals belatedly instituted smoking bans in the late twentieth century, smoking remained an integral part of life for many seriously ill patients, with implications not only for public health but for the ongoing treatment of psychiatric disorders. Making matters worse, well-meaning tobacco-control policies have had the unintended consequence of further stigmatizing the mentally ill. A groundbreaking look at a little-known public health problem, *Smoking Privileges* illuminates the intersection of smoking and mental illness, and offers a new perspective on public policy regarding cigarettes.

Popular, controversial, inspiring and irritating, Hans Eysenck was a man of paradoxes and contradictions. This intriguing and highly readable biography examines the life and work of the influential psychologist and places them within the scientific, historical, social and political contexts.

The Report on Smoking and Health published by the Royal College of Physicians in England in 1965 warned of a connection between lung -cancer and smoking. The findings were widely publicized, and were accepted by practically every-one-indeed, they persist today. As Hans J. Eysenck shows in his classic study *Smoking, Health, and Personality*, the results were by no means immune to challenge. Not only were the experimental and statistical methods employed vulnerable to criticism, but the results were open to more than one interpretation. In this new edition, Stuart Brody reviews Eysenck's achievement. Eysenck critically reviewed the literature, presented longitudinal studies showing that psychological characteristics are far more potent predictors of heart disease and cancer than smoking behavior, and demonstrated that psychological treatment can halve death rates. Eysenck also spoke the unspeakable, iconoclastically attacking the cherished attribution of millions of deaths to smoking. He examined the interaction of smoking with personality and constitutional factors, and the connection between these factors and the development of cancer. Eysenck saw the cause-and-effect relation between cancer and smoking as oversimplification. He also makes a number of practical suggestions for the kind of social action that could be taken to decrease the incidence of lung cancer. For his part, Brody notes that

massive campaigns which exhort people to eschew tobacco or cholesterol have had little or no demonstrable health benefits. This original and stimulating volume is written with great clarity and is easily understood by the layman. It is an incisive account of one of the most important social problems in this country today, and a challenge to orthodoxy in the medical world. As such, this volume offers much for both sides of the anti-smoking lobby, as well as those in the fields of psychology, political science, and sociology. .

Thoroughly updated to include the latest research available, THEORIES OF PERSONALITY, 10E takes a unique theory by theory approach that carefully guides students through major theories on their way to a comprehensive understanding of personality. Richard Ryckman's student-friendly writing style offers a straightforward presentation of major theories, helping readers more easily distinguish between them. The text begins by providing a framework that defines personality and emphasizes the science of personality--including the interrelation between research and theory. Next it introduces each major theoretical position with an objective overview of the theorist's basic concepts and principles. It concludes by noting the ways in which the different theories stimulate additional research efforts and by presenting five current research trends resulting from the work of these earlier theorists. The result is a text that merges the best of classic and contemporary research to equip students with a solid working knowledge of personality. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

From the bestselling author of *The Bomber Mafia*: discover Malcolm Gladwell's breakthrough debut and explore the science behind viral trends in business, marketing, and human behavior. The tipping point is that magic moment when an idea, trend, or social behavior crosses a threshold, tips, and spreads like wildfire. Just as a single sick person can start an epidemic of the flu, so too can a small but precisely targeted push cause a fashion trend, the popularity of a new product, or a drop in the crime rate. This widely acclaimed bestseller, in which Malcolm Gladwell explores and brilliantly illuminates the tipping point phenomenon, is already changing the way people throughout the world think about selling products and disseminating ideas. "A wonderful page-turner about a fascinating idea that should affect the way every thinking person looks at the world." -Michael Lewis

Personality Theories: Critical Perspectives is the groundbreaking, final text written by Albert Ellis, long considered the founder of cognitive behavioral therapies. The book provides students with supporting and contradictory evidence for the development of personality theories through time. Without condemning the founding theorists who came before him, Ellis builds on more than a century of psychological research to re-examine the theories of Freud, Jung, and Adler while taking an equally critical look at modern, research-based theories, including his own.
