Seminar paper from the year 2020 in the subject Business economics - Investment and Finance, Catholic University of Eastern Africa (School of Business), course: Finance, language: English, abstract: This study sought to establish the factors that affect dividend payout of listed commercial banks in Kenya. Specifically, profitability, liquidity, firm size, and past dividend were determined if they affected dividend payout among listed commercial banks in Kenya. The study was based on the Bird in Hand Theory. A correlational research design was used to examine relationship among the variables. The target population for this study consisted of all listed commercial banks in Kenya. Purposive sampling procedure was used to select listed commercial banks for the study. The study employed secondary data which was obtained from the financial statements of the commercial banks for a period of five years ranging from 2012 to 2016. The study showed that profitability, liquidity, firm size and past DPS accounted for 77.69% of variations in dividend payout for listed commercial banks. All the four factors were found to be significant in affecting dividend payout for the listed commercial banks. Profitability and past dividend per share were found to be positively correlated with dividend payout while liquidity and firm size were found to be negatively correlated with dividend payout. The researcher recommends more research to be done taking into consideration other factors. These include factors such as the commercial banks management, legal environment, and competition within the banking industry.

This paper reviews and analyzes the effects that external (or exogenous) factors, defined as economic factors that cannot be controlled or influenced by the central bank, have on monetary policy and the monetary policy transmission mechanism. Adopting a theoretical research position, we aim at identifying the main external factors to monetary policy and discuss the ways in which these factors alter the economic environment and implicitly the monetary policy transmission mechanism. This is done by changing the way in which monetary transmission channels work and deliver monetary policy decisions throughout the economy, with the final goal of producing central bank desired outcomes with regard to economic variables like inflation, employment, or the production level. We will begin this article with a brief introduction on the topic of monetary policy, the monetary policy transmission mechanism and the potential external factors that may influence the monetary policy and the functioning of its transmission mechanism. The main external factors are identified as linked to fiscal policy, commodity prices, financial market volatility or other globalization related processes. After this introduction, we will proceed with the analysis of the nature and influences of each of the above mentioned external factors on monetary policy and its transmission, identifying the potential ways in which they can change the structure and internal processes of the transmission channels. As we will see in the study and highlight in our conclusion, the external factors cause decisive changes in the way monetary policy is transmitted, and thus will strongly influence the decisions that central banks take in order to alter key economic variables. The profound understanding of how these non-central bank controlled factors influence the monetary policy transmission mechanism is a key requirement for central banks, as only by being able to predict, recognize and evaluate the effects of current or future external factors can they succeed in reaching their monetary policy objectives.

Research Paper (undergraduate) from the year 2018 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, , language: English, abstract: This study is attempted to examine factors affecting non-performing loan of development bank of Ethiopia. The main objective is to examine the factors affecting nonperforming loans in DBE central region. After problem identification, research hypothesis was developed which inquires the relationship and effect of non-performing loans on development bank of Ethiopia. Both secondary and primary data were used in the research. The data is then analyzed using descriptive, correlation and regression techniques through SPSS and Stata software program. Also the result of the primary data indicated that in regarding about customer's specific causes, the result showed that credit culture of customers, lack of business knowledge, delayed approval, profit of the business, business location were determinants of non-performing loan while bank specific factors include poor credit assessment, poor customer selection, aggressive lending policy, borrowers culture, credit size affected non-performing loan.

This paper examines empirically the role of bank market power as an internal factor influencing banks' reaction in terms of lending and risk taking to monetary policy impulses. The analysis is carried out for the U.S. and euro-area banking sectors over the period 1997-2010. Market power is estimated at the bank-year level, using a method that allows the efficient estimation of marginal cost of banks also at the bank-year level. The findings show that banks with even moderate levels of market power are able to buffer the negative impact of a monetary policy change on bank loans and credit risk. This effect is somewhat more pronounced in the euro area compared with the United States. However, following the sub-prime mortgage crisis of 2007, the level of market power needed to shield bank loans and credit risk from the impact of a change in monetary policy increased substantially. This is clear evidence that the financial crisis reinforced the mechanisms of the bank lending and the risk-taking channels.

Abstract: Unlike many developed countries, internet banking is a new phenomenon for Pakistani consumers as majority of banking customers seems to be fairly unfamiliar with different aspects of this service. This can be due to the diverse educational backgrounds, level of internet access, personal experiences and different socio-cultural backgrounds of customers. The present study looked at various factors influencing adoption of internet banking in Pakistan. The study used survey methodology with a sample of 250 individuals. Results of the research revealed reluctance to change has no significant impact on adoption of internet banking. On other hand access to internet, ease of use and security and privacy are found to be critical factors influencing adoption of internet banking. The results of the present study may facilitate policy makers and bank management to advance electronic banking services in Pakistan in a befitting manner. Lastly, managerial implications, study limitations and futur

This book is a comprehensive, yet concise text that brings together all aspects of SME banking theories and empirical studies in one text. The book contains the latest policy debates on money creation and credit rationing and the relative role of demand-side and supply-side factors affecting SME financing. Readers will understand the borrower-specific, lender-specific and business environment drivers of bank finance for SMEs as well as the determinants of loan contract terms, particularly the risk premium and collateral. Readers will also understand how loan officers acquire proprietary information on SMEs and apply various lending techniques, such as financial statement lending, relationship lending and credit scoring to the loan underwriting process. In addition, the book also features recent trends on the rise of alternative finance intermediaries such as online peer-to-peer lenders and the competitive implications for traditional banks providing loans to SMEs. Findings from this work will thus be of particular interest to commercial bankers, bank-dependent small business borrowers as well as policy makers, and researchers in central banks, development banks, development agencies and international financial institutions.

"How should independent central banks react if pressured by fiscal policymakers? We study an environment with strategic monetary-fiscal interactions where the central bank has a limited degree of commitment to follow policies over time and the fiscal authority has none. We contrast the implications of two monetary frameworks: one where the central bank follows a standard rule aiming exclusively at price stability against the other, where monetary policy additionally leans against fiscal influence. The latter rule improves economic outcomes by providing appropriate incentives to the fiscal authority. More importantly, the additional fiscal conditionality can enhance the credibility of the central bank to achieve price stability. We emphasize how the level and structure of government debt emerge as key factors affecting the credibility of monetary policy with fiscal conditionality."--Abstract.
