The popular Flash Kids Workbooks now features STEM enrichment sections and easy-to-tackle projects for wherever learning takes place! This comprehensive line of workbooks was developed through a partnership with Harcourt Family Learning, a leading educational publisher. Based on national teaching standards for Grade 4, this workbook provides complete practice in math, reading, and other key subject areas. New content includes an introduction to STEM concepts and terms, how STEM impacts everyday life, concept review quiz, and fun, engaging projects that reinforce the subjects. Flash Kids Complete Curriculum Grade 4 also includes a new introduction providing recommendations for educators on how to use this volume to differentiate lessons in the classroom and instructions to integrate the content into hybrid and remote learning.

This test prep is good for kids who are on the fence and having trouble passing, or need to increase their margin. These kids will often say "I DON'T KNOW WHERE TO START" when explaining their confusion.This book address that problem with three approaches.1) In contrast with the other study guides that use random questions in their practice exams; this book collated the questions into chapters based on the logic to solve them. The 4th The grade book is divided into seven chapters. They are Logic, Arithmetic, Geometry, Fractions, Reading Graphs and tables, Measurements including a ruler, and basic statistics.This book teaches basics then goes into practice exams with word problems. Once the student is proficient with the questions organized into chapters then they are ready for random questions.2) This study guide has thousands of practice problems. I have placed over 3100 videos on YouTube showing you how to work the problems3) I reviewed several years of past exams and placed enfaces on the easiest and most common questions. Mastering these questions should yield a 75% to 80%. If a student is already achieving this percentage; the other guides or web site with random questions and covering all material might be best.A book might be better for your student than the web sites for two reasons. 1) The more common and easiest questions are using a ruler to measure. The web designers don't know the size of your computer screen and can't determine if the student has measured correctly. We can get a high percentage of these problems easily.2) When studying on a computer there are too many websites with the answers. With a book; parents can have greater assurance the work is being done. This book is developed by a trained professional out of concern. It is not the product of a large publishing house. It is the results of one person who wants to help.Best RegardsMark Shannon
