Take the first step to building your own hydroponic and greenhouse garden. To get started, scroll up and grab your copy today. *The book bundle does not consist of 3 separate books but combines all 3 books into 1 book.

▯ THIS BOOK INCLUDES: "Hydroponics" and "Diy Hydroponic Gardens" Do you want to learn how to setting up a hydroponics garden in your backyard and growing plants all year round.? If yes, then keep reading... Hydroponics is the study of soilless plants. You might have heard of soil-less society, which is another term often used to explain the same thing when you haven't heard about the hydroponics. The same natural elements are used to grow plants in soils, so that weeds, soil-borne pests, and diseases do not harm the plants. Hydroponics allows us to grow plants with excellent results indoors. Most plants grow well with water indoors, as the feed does not produce large flowers or thickened foil, just adding a quality feeding schedule does not spurn the plant at all with only daylight as a light signal from outside. Nevertheless, because you cannot change our weather or lighting time, you cannot control the cycles of these plants in the first place through artificial light, which provides a constant lighting signal on a timely basis, regardless of the time of year. It was quickly noticed that the lights were on for 16 to 18 hours a day, and if changed to 10-12 hours a day, a blooming period was shifted to that of these plants under' hydroponic lighting.' When it was discovered by pure accident with cold elements outside, the stronger the light source, the greater the growth rate of these plants when the flowering occurred, of course, light alone is not likely to produce high growth or flora unless the air is full of CO2 and the nutrients and minerals are of quality. Hydroponics is now starting to play a more significant role in agricultural production around the world. Hydroponic gardening has been widely used since the 1970s, but it has become more accessible for the household grower only recently. Demand for environmentally friendly and safer goods in society has been an essential factor in this development. This book covers the following topics: What is Hydroponics? Hydroponic and the Science How Hydroponic Gardening Works Why is Hydroponics Preferred for Indoor Gardening? Advantages and Disadvantages of a Hydroponics System Types of Hydroponics Growing Systems Necessary Equipment to Build Your Own Hydroponic System Choosing the Best Lighting Medium for Your Hydroponic Plants Room Conditions and Water Quality Starting Your Seeds The Best Plants to Grow Using Hydroponics How to Maintain Your Hydroponic System Tips and Tricks to Growing Healthy Herbs, Vegetables and Fruits Nutrition for Hydroponics Mistakes to Avoid How to Build Your Own System Pests Control Common Problems and How to Avoid Them Business Tips And Information About Hydroponics Top Ten Reasons to Grow a Hydroponic Garden Enjoying the Yields Other Important Aspects of a Hydroponics System ...And so much more! Since the Hydroponic industry, to be very truthful, is still small and there are few local stores to buy supplies, the alternative is on-line garden stores that concentrate on providing hydroponic garden supplies and even ready to use, prefabricated hydroponic gardens for people who cannot wait to get started. And in cooperation with some of the best companies in the industry, however, we are endeavoring to select components, nutrients, and accessories you may need to build, sustain, and maintain the gardens featured in this publication. Ultimately, reading through this book is going to guide you through everything you will need to know. Whether you have a lot of space or none at all, you can make hydroponics work for your own household, and that is precisely what you will be learning to do. Ready to get started? Click "Buy Now"!

2 Manuscript in 1 Book If you are asking yourself: how long will it take to grow that plant? Does it like wet or dry soil? Is the plant tall, low or sprawling? Do you have the room for it and does it need a trellis? ... this book is for you! You may be surprised at how much garden produce you can grow in a small space such as a balcony, veranda or courtyard. Book 1: Hydroponics The book has a comprehensive guide that covers everything from the growing medium to the tank requirements. It also discusses what you can expect in terms of system maintenance and troubleshooting. This comprehensive beginner guide to starting with hydroponics will answer many questions about growing with hydroponics. Here's some of the info that you're going to discover in Hydroponics: The Basics of Hydroponics Types of Hydroponic Systems Choosing the Right System for You Growing Medium, Nutrients, and Lighting How to maintain your garden and system How to maintain the integrity of your plants By the time you have finished reading this book, you will have a better understanding of what hydroponics is, what systems best suits your lifestyle and budget, as well as how to start setting up your own hydroponics system. Book 2: Greenhouse Gardening Fruit and vegetables can be grown in many different ways. The way you choose to grow them may vary according to climate, space available, or a variety of other factors. In this book you will learn: How to Build a Greenhouse How to Grow in a Greenhouse Types of Greenhouses Greenhouses Environment Greenhouses vs Polytunnels Cleaning a Greenhouse Potential Problems in a Greenhouse Greenhouse Insect Management Gardening Ideas ..and much more You will be growing your own fresh produce in no time at all while reaping the health benefits of fresh grown organic produce. Take the first step to building your own Greenhouse garden! Click "buy now" to grab your copy!
