The ISSN of Journal of Dairy Research is 00220299, 14697629. An ISSN is an 8-digit code used to identify newspapers, journals, magazines and periodicals of all kinds and on all media-print and electronic. Journal of Dairy Research - Subscription (non-OA) Journal Journal of Dairy Research is a Subscription-based (non-OA) Journal.

Dairy science includes the study of milk and milk-derived food products, examining the biological, chemical, physical, and microbiological aspects of milk itself, as well as the technological (processing) aspects of the transformation of milk into its various consumer products, including beverages, fermented products, concentrated and dried products, butter and ice cream. This encyclopedia includes information on the possible impact of genetic modification of dairy animals, safety concerns of raw milk and raw milk products, peptides in milk, dairy-based allergies, packaging and shelf-life and other topics of importance and interest to those in dairy research and industry. The Encyclopedia of Dairy Sciences is the only work available that covers in detail the entirety of dairy science, from husbandry of dairy animals, milk production, through the processing of milk into a myriad of dairy products and ingredients, to the effect of dairy foods on human health. The third edition of Encyclopedia of Dairy Sciences will retain the split that characterized the earlier editions - one-third primary production, two-thirds dairy food. Unlike earlier editions, in which articles were arranged in alphabetical order by topic, this edition will be optimally organized into 9 coherent sections. This new edition contains 500 articles, the vast majority of which has been significantly revised or is completely new. Only 40 chapters have been retained from the earlier edition as they cover basic science areas still relevant and important today. All articles have been reviewed by specialists in their area. Comprehensive and authoritative introductory articles on all aspects of dairy science from on-farm aspects, to processing, to consumers Content is written and edited by leading authorities from across the globe making this the go-to foundational reference in the dairy science community Articles are intuitively and meticulously organized into 9 coherent sections on key topics, making it easier for the reader to access relevant information quickly
