This book brings together politics, law, financial services regulation, economics and housing policy in the analysis of mortgage lending and macroprudential policy in the UK and US. The book addresses the relationship between housing policy, credit and financial instability in light of the recent global financial crisis,

and proposes both short and long-term solutions. Although it is not known where the next crisis will come from, history suggests that it will have credit and property at its source. Thus, it is important that the UK and other countries look more broadly at what should be done in terms of policies, institutions and tools to make the housing market and mortgage lenders more resilient against a future crisis. This book sets out a number of workable proposals. Central to this work are questions relating to the quantitative macroprudential measures, such as loan-to-value (LTV) and debt-to-income (DTI) restrictions, and whether these can be used to any significant extent in western democracies and, if employed, whether they are likely to be effective. In particular, the book questions the political legitimacy of their use and the potential consequences for the institutions, such as central banks, promulgating such policies. Preserving financial stability in very uncertain market conditions is of key importance to central bankers and other regulators, and macroprudential policy is a rapidly growing subject for both legal and economics study. This book will therefore be of interest to financial professionals, policy-makers and academics.

Also known as "The Red Book", this authoritative manual from the creators of PostScript contains the complete description of every command and operation in the language, plus information on the recent Language Level 3 extensions. The CD-ROM contains the entire text in PDF.

their fears of "overstepping" and in the face of the complex obstacles to nurturing the inner life of children in a school setting. Since the mid-1990s, when Daniel Goleman established that nurturing a young person's "emotional intelligence" enhances his or her ability to learn, schools have been struggling with ways to attend to students' emotional and social -- as well as intellectual -- development. Yet too many recent books and programs tout the "character education" of children as a cure for incivility and worse, and too many of these are barely disguised tracts with religious or culturally noninclusive agendas.
