In terms of design procedure, the landing gear is the last aircraft major component which is designed. In another word, all major components (such as wing, tail, fuselage, and propulsion system) must be designed prior to the design of landing gear. Furthermore, the aircraft most aft center of gravity (cg) and the most forward cg must be known for landing gear design.

The complicated interaction of a large number of structural components makes the task of landing gear design and simulation particularly difficult. Various aspects of the mechanical system such as kinematics, contact, friction, damping, and others may need to be included in a single analysis. SIMULIA's products allow many of the various analysis requirements of landing gear systems to be handled with a single analysis code.
