This book provides fundamental information on pet birds, menaces, and advances made in the diagnosis and treatment of menaces. It is the only book covering all species of pet birds, menaces and their individual management. The handful of related books available worldwide are largely outdated and focus on a single species or breed of pet bird. The book encompasses the history of bird keeping, common breeds of birds, their nutritional requirements, list of zoonotic diseases transmitted by birds and guideline for their prevention. It covers infectious, non-infectious clinical and metabolic diseases, and toxicity in detail with a special focus on the history of diseases, etiology, affected hosts, pathogenesis, clinical signs, diagnosis and treatment. Separate chapters detail relevant diagnostic techniques, management and care practices, including updated information. The book offers an invaluable guide for students and teachers in the field of (avian) veterinary medicine, scientists/research scholars working in related fields, and avian medicine practitioners, as well as all those progressive bird owners who want to know the basics of their care and management.

Drawing on the findings of neuroscience, this text proposes and defends the hypothesis that the various modalities of sensation share a generic form that the author, Austen Clark, calls feature-placing.

At the dawn of the Industrial Age, the kingdom of Niune is ruled by the Seelie Court-half-human faelings descended from seelie fae. Sworn to the forces of light, the Seelie Court is dedicated to the destruction of all who bear the taint of unseelie fae blood. Mina Cole is an indentured worker-a factory slave. She has lived her entire life ignorant of her fae heritage, until at last a moment of terror reveals the winter magic that has lain dormant within. Now that her power is awakened, the hunters of the Seelie Court will not rest until they have slain Mina and all who stand with her. Her only hope of survival lies in the hands of man crippled in both body and spirit. One terrible night thirty-five years ago, Duncan RiDahn lost both his lover and the use of his legs to the Seelie Court. Into Duncan's web of regret comes Mina, whose dark power both alarms and attracts him. For Mina wields a terrible magic that may ultimately prove a greater threat to the faelings of Niune than all the hunters of the Seelie Court combined.

Dr. Greg Zacharias, former Chief Scientist of the United States Air Force (2015-18), explores next steps in autonomous systems (AS) development, fielding, and training. Rapid advances in AS development and artificial intelligence (AI) research will change how we think about machines, whether they are individual vehicle platforms or networked enterprises. The payoff will be considerable, affording the US military significant protection for aviators, greater effectiveness in employment, and unlimited opportunities for novel and disruptive concepts of operations. *Autonomous Horizons: The Way Forward* identifies issues and makes recommendations for the Air Force to take full advantage of this transformational technology.
