background.

Although more widely utilized in Europe and other parts of the world, musculoskeletal ultrasound is gaining wider acceptance in this country not only because of its ability to image anatomic structures but also because of its low cost compared with magnetic resonance. Reviewed in this issue is imaging of common tendon and muscle injuries of the upper and lower extremities, the rotator cuff, musculoskeletal infections, nerve abnormalities, soft tissue masses, and hernias among others. Also covered are the

education: the move from amateurism to professionalism in teaching. In the past, medical schools and other health professions' training institutions have been criticized for their resistance to the adoption of the science of medical education. Very few of us learned how to teach as medical students and most of us have our teaching responsibilities thrust on us with little preparation. The award of a basic medical degree was assumed to carry with it basic teaching expertise, unfortunately an unwarranted assumption in some cases.
