Programming Constructs. Recall from last time, a program is a set of instructions that the computer executes. But I did not get into details about the order they would be executed. This is where programming constructs come into action. They are used to control the order/flow in which instructions are executed (or not executed).

C++ is a general-purpose object-oriented programming (OOP) language, developed by Bjarne Stroustrup, and is an extension of the C language. It is therefore possible to code C++ in a "C style" or "object-oriented style." In certain scenarios, it can be coded in either way and is thus an effective example of a hybrid language.
