Graham Hutton. 4.04 · Rating details · 368 ratings · 33 reviews. Haskell is one of the leading languages for teaching functional programming, enabling students to write simpler and cleaner code, and to learn how to structure and reason about programs. This introduction is ideal for beginners: it requires no previous programming experience and all concepts are explained from first principles via carefully chosen examples.

Get Free Programming Haskell Graham Hutton

Graham Hutton Professor of Computer Science at the University of Nottingham. Co-leader of the Functional Programming Lab. My research interests are in the mathematics of program construction. The aim of this area is to develop simple but powerful techniques for writing and reasoning about computer programs, by recognising and exploiting their underlying mathematical structure.

Graham Hutton

It might be a bit tricky to follow for someone new to programming as well as being new to the functional programming paradigm, but for my students, with a solid year (at least) of Computer Science studies, it is pitched perfectly.
