

## Pythagorean Theorem Word Problems With Answer Keys

Right here, we have countless books **pythagorean theorem word problems with answer keys** and collections to check out. We additionally have enough money variant types and as a consequence type of the books to browse. The within acceptable limits book, fiction, history, novel, scientific research, as without difficulty as various supplementary sorts of books are readily reachable here.

As this pythagorean theorem word problems with answer keys, it ends going on physical one of the favored ebook pythagorean theorem word problems with answer keys collections that we have. This is why you remain in the best website to look the incredible book to have.

Pythagorean theorem challenge (practice) | Khan Academy

A short equation, Pythagorean Theorem can be written in the following manner:  $a^2+b^2=c^2$ . In Pythagorean Theorem, c is the triangle's longest side while b and a make up the other two sides. The longest side of the triangle in the Pythagorean Theorem is referred to as the 'hypotenuse'. Many people ask why Pythagorean Theorem is important.

The Pythagorean Theorem is a special case of the Law of Cosines, which states that:  $c^2 = a^2 + b^2 - 2ab \cos(\theta)$  where  $\theta$  is the angle opposite side  $c$ . In the case of a right triangle, the cosine of  $90^\circ$  is 0 and the equation simplifies to the Pythagorean Theorem.

---

## Pythagorean theorem word problem: fishing boat (video ...

First, use the Pythagorean theorem to solve the problem. The side opposite the right angle is the hypotenuse or  $c$ .  $c^2 = a^2 + b^2$ .  $c^2 = 11^2 + 60^2$ .  $c^2 = 121 + 3600$ .  $c^2 = 3721$ .  $c$  is equal to the square root of 3721, so  $c = 61$ . Now here is how to check your answer with the Pythagorean theorem calculator.
