"My heart wandered through the world constantly seeking after my cure, but the sweet and delicious water of life had to break through the granite of my heart." When the words of Rumi enter your heart, something softens, breaks, and is subtly reborn. That he wrote the words seven hundred years ago in a medieval Persian world that bears little resemblance to ours makes their uncanny resonance to us today just that much more remarkable. Here is a treasury of daily wisdom from this most beloved of all the Sufi masters—both his prose and his ecstatic poetry—that you can use to start every day for a year, or that you can dip into for inspiration any time you need to break through the granite of your heart.

In the midst of Trump's attacks on the media, comes this look at the rigorous, independent reporting of the year's most underreported news stories. While the country's president displays a brazen disregard for the First Amendment and routinely demonizes the press as "the enemy of the people," *Censored 2020* looks beyond Donald Trump's dizzying contempt for the truth to clarify the corporate media's complicity in misinforming the American public--while also providing a clear vision of a better future, based on rigorous, trustworthy independent reporting that presents a fuller picture of truth. With a discerning eye, *Censored 2020* focuses the public's attention on the most important but underreported news stories of 2018-2019. These stories expose the corporate news media's systemic blind spots while highlighting the crucial role played by independent journalists in providing the kind of news necessary for informed, engaged citizens. The book also examines this year's lowlights in "junk food news" and "news abuse"--further revealing how corporate news often functions as propaganda--as well as highlights of exemplary organizations that champion "Media Democracy in Action." Additional chapters address the importance of constructive journalism, the untold story of Kashmir, news coverage of LGBTQ issues in the Trump era, "fake news" as a Trojan horse for censorship, and online memes as a form of political communication.

Travel Mazes contains over 35 fun and colorful travel themed mazes for the youngest puzzler, including traditional mazes, string mazes, pattern mazes, and more! Specifically created for kids ages 3-6, this activity book is filled with mazes -- and every twist and turn offers a unique first-puzzling experience! Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The

long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, or lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.

Written from a psychological perspective while integrating cross-disciplinary viewpoints, this fully updated Second Edition takes a parent-centered approach to exploring topics such as the reasons behind parental behavior, the effect parents and children have on one another, and social policy's ability to help families. Including the latest statistics on family functioning and with coverage of contemporary issues, George Holden's *Parenting* conveys the process of parenting in all its complexities.

Cilia--the tiny hairlike structures on the surface of cells---have recently been identified as playing a role in a variety of disease and developmental disorders. Absent or defective cilia in certain cells can cause infertility, blindness, kidney disease, and lung disease. This volume presents recent findings in cilia research and current thought on the role of cilia in disease and developmental abnormalities.

Noted logician discusses both theoretical underpinnings and practical applications, exploring set theory, model theory, recursion theory and constructivism, proof theory, logic's relation to computer science, and other subjects. 1981 edition, reissued by Dover in 1993 with a new Postscript by the author.

In this innovative work Jean Hillier develops a new theory for students and researchers of spatial planning and governance which is grounded primarily in the work of Gilles Deleuze. The theory recognizes the complex interrelation between place qualities and the multiple space-time relational dynamics of spatial governance. Using empirical examples from England and Australia, Hillier identifies the power of networks and trajectories through which various actors territorialize space and explores the social and political responsibilities of spatial managers and decision-makers. She considers what spatial planning and urban management practices could look like if they were to be developed along Deleuzean lines, and suggests alternative framings for spatial practice: broad trajectories or 'visions' of the longer-term future and shorter-term, location-specific detailed plans and projects with collaboratively determined tangible goals.
