Fully updated to reflect the provisions of the 2007 National Fire Alarm Code (NFPA 72) and the 2005 National Electrical Code (NFPA 70, this brand-new edition provides all the information you need to design, install, or maintain fire alarm systems. It has been reorganized to follow the order of topics presented within the NAFC, and includes updated requirements for power supplies, survivability, and spacing of detectors and notification appliances.

The Fairfield Fire Department (FFD) is one of two public safety departments within the City of Fairfield and is the City's sole provider for fire and life safety services to a population of over 108,000 residents within a 37 square mile radius. The problem was that during the planning for fire prevention week, it was discovered that there were no guidelines for distributing smoke detectors to the community. The purpose of this study was to develop a smoke detector policy for the Engine Companies to distribute to the citizens of Fairfield. Action methodology was used to gather the data to answer the research questions. The research questions were: (a) What types of smoke detector programs are established in other Fire Departments? (b) What will be the benefits of distributing the smoke detectors? (c) What funds will pay for the cost of the smoke detectors? (d) What process will be used to implement the smoke detector policy? The procedures utilized were interviews, surveys, and a joint labor management process for the writing of the smoke detector policy. The results indicated that a smoke detector policy was a positive first step to a more involved Fairfield Fire Department smoke detector program. The policy was written and implementation was started. The policy helped identify homes with free smoke detector distributed by the Fairfield Fire Department. The information received from the citizens would be written into the FFD record keeping system for future positive or negative data. The summary of the recommendations will be for the FFD to continue to build on the smoke detector distribution policy for the Engine Companies. The FFD needs to continue pursuing free smoke detector grants. A smoke detection policy and positive public relations can be obtained from free smoke detectors and this will save lives.
