Why do zebras have stripes? Popular explanations range from camouflage to confusion of predators, social facilitation, and even temperature regulation. It is a challenge to test these proposals on large animals living in the wild, but using a combination of careful observations, simple field experiments, comparative information, and logic, Caro concludes that black-and-white stripes are an adaptation to thwart biting fly attack.

In Stripes: Design Between the Lines, writer and design expert Linda O'Keefe explores the lineage of lines as they shape culture, art, and style. The illustrations create a rollicking visual ride while the accompanying text by turns witty and weighty—shows how these potent, sometimes-charged symbols have even changed the course of world history. The simplest and most ancient of all decorative markings, stripes perpetually fascinate. Natural inspirations in the forms of zebra stripes, rippled sand dunes, and intricately gnarled wood grain have led us to use stripes in every permutation: on human bodies from elaborate woven textiles to the iconic Breton T-shirt to sharp pin-striped suits, in art from the earliest cave paintings to vibrant op art canvases, and in industrial design from World War II-era dazzle battleships to the ubiquitous bar code. Their appeal endures. With over 250 full-color

images, *Stripes: Design Between the Lines* provides a wholly original look at one of the most recognizable patterns of all time. Eight thematic chapters present stripes in every conceivable manifestation, from diabolical to decorative, historic to postmodern. The result is a wonderfully varied visual collage that shows how design-savvy people throughout the ages and recent design stars including Jonathan Adler, Geoffrey Beene, Jamie Drake, Jean Paul Gaultier, Josef Hoffman, Sol LeWitt, Todd Oldham, Alberto Pinto, Giò Ponti, Karim Rashid, David Rockwell, Carolyne Roehm, Paul Smith, and Vivienne Westwood have incorporated stripes into their work and daily lives.

France's brightest young scientist lucidly explains the intricacies of the animal kingdom through the lens of evolutionary biology. Why do giraffes have such long necks? Why are zebras striped? And why does the clitoris of the female hyena exactly resemble and in most respects function like the male's penis? Deploying the latest scientific research and his own extensive observations in Africa, Léo Grasset offers answers to these questions and many more in a book of post-Darwinian. Complex natural phenomena are explained in simple and at times comic terms, as Grasset turns evolutionary biology to the burning questions of the animal kingdom, from why elephants prefer dictators and buffaloes democracies, to whether the lion really is king. The human is, of course, just another animal, and the author's exploration of two million years of human evolution shows how it not only informs our current habits and behavior, but also reveals that we are hybrids of several different species. Prepare to be fascinated, shocked, and delighted, as well as reliably advised—by the end, you will know to never hug the beautiful, cuddly honey badger, and what explains its almost psychotic nastiness. This is serious science at its entertaining best.

Students will learn all about intriguing adaptations that help animals survive in their environments, such as what playing a video game can teach us about striped lizards, the power of the chameleon's sticky tongue, how wriggling and slashing saves frog eggs, a good partnership between sweet plants and ants, and the secret of the swordfish's slippery head. Primary sources include interviews with scientists and original photos. Engaging yet simple language makes complicated scientific principles easy to grasp. A hands-on activity allows students to take on the role of scientist and examine these amazing adaptations themselves.

How did the zebra get its stripes? This little animal fable answers that age old riddle in an amusing and clever way. In this fanciful story of jealousy and intrigue, the proud white horses are taught a valuable lesson. They learn about equality, humility and democracy. Beautifully illustrated, this story is perfect bedtime reading for all ages.

Striped bass - in fresh and salt water - are one of the world's greatest gamefish, and *The Complete Book of Striped Bass Fishing* is the fullest, most authoritative, most helpful book ever written on the species. Nick Karas, one of the world's great experts on the striped bass, offers proven techniques for more successful fishing. He details fishing from the surf; from boats; from bank, pier, jetty, and bridge - with all kinds of tackle and methods. And he takes an especially careful look at the growing popularity of fly rodding for stripers, fishing at night, and even how to catch striped bass in fresh water. An entire section of the book is devoted to tackle - where he takes a thorough look at the best rods, reels, lines, hooks, live and natural baits, artificial lures, accessory equipment of all kinds, bass boats, and the most innovative and practical beach vehicles. *The Complete Book of Striped Bass Fishing* offers a comprehensive look at every aspect of the striped bass, making it a book that no one who fishes for this great gamefish will want to be without, and the essential book for all striped-bass enthusiasts. Skyhorse Publishing is proud to publish a broad range of books for fishermen. Our books for anglers include titles that focus on fly fishing, bait fishing, fly-casting, spin casting, deep sea fishing, and surf fishing. Our books offer both practical advice on tackle, techniques, knots, and more, as well as lyrical prose on fishing for bass, trout, salmon, crappie, baitfish, catfish, and more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to publishing books on subjects that are sometimes overlooked by other publishers and to authors whose work might not otherwise find a home.
